

EVALUACION GENÉTICA NACIONAL RAZA HOLANDO MARZO 2006

Aspectos a remarcar de la presente edición de la Evaluación Genética Nacional de Ganado Holando.

SECCIONES: Esta comunicación está compuesta por tres grupos de padres evaluados.

La **Sección I** presenta padres evaluados por características de producción y tipo, nacidos **a partir del año 1986**.

La **Sección II** presenta padres evaluados solamente por características de producción, nacidos **a partir del año 1986**.

La **Sección III** presenta padres evaluados por características de producción y/o tipo, nacidos **antes del año 1986**.

Para que la información de un padre sea publicada en cualquiera de las secciones deberá contar con una Repetibilidad mínima de 0,6 y tener al menos 10 hijas en 3 o más rodeos.

Los valores genéticos para las características de producción están expresados en **Diferencia Esperada en la Progenie (DEP)**, que equivale a la mitad del valor de cría del animal. Las unidades utilizadas son kilogramos para la producción de leche, y kilogramos y porcentaje para los componentes grasa y proteína.

Los valores genéticos para las características de tipo se expresan en **Valor Genético Estandarizado (VGE)**, el cual indica cuantos desvíos estándares se aparta de la media de dicha características el valor genético del animal.

La base genética considerada para cada característica es el valor genético promedio de las hembras nacidas en el **año 2000**, cuyo registro ha sido considerado para esta edición de la evaluación.

Existen 9 (nueve) padres que cumplen con los requisitos de edición para las características de producción, leche y proteína, pero presentan una repetibilidad entre 0,55 y 0,6 para kilogramos de grasa. Dado el énfasis que hemos dado en proveer información sobre componentes de la leche se consideró oportuno presentar los valores preliminares para estas características, los cuales se detallan en un Apartado al final de la Sección II.
